Description

A wonder of organic undulations that move about in the light, the Vision Container is constructed of durable, lightweight fiberglass to be strong and beautiful. This modern recycling/trash container is then custom finished to exact specifications in a choice of fade-resistant marine grade paints or one of our signature Fusions, a unique finish that ages gracefully over time by developing a soft patina. Shown above in Matte Black with a Recycle/Trash top but can also be used as a planter only. Contact IAP directly for details on recycle and custom applications.
